1 Tuning schema matching software using synthetic scenarios
Mayssam Sayyadian, Yoonkyong Lee, AnHai Doan, Arnon S. Rosenthal
August 2005 VLDB '05: Proceedings of the 31st international conference on Very large data bases
Publisher: VLDB Endowment
Full text available: pdf(320.02 KB) Additional Information: full citation, abstract, references, cited by, index terms

Most recent schema matching systems assemble *multiple components*, each employing a particular matching technique. The domain user must then *tune* the system: select the right component to be executed and correctly adjust their numerous "knobs" ...

2 Developing an XML framework for metadata system
Ruey-Shun Chen, Shien-Chiang Yu
September 2003 ISICT '03: Proceedings of the 1st international symposium on Information and communication technologies
Publisher: Trinity College Dublin
Full text available: pdf(383.59 KB) Additional Information: full citation, abstract, references

Metadata is the media to describe the management and storing of kind of knowledge and well-preserved objects. Thus, with the compatibility of all various metadata, we can integrate related knowledge and with unification and management of information ...

Keywords: DTD, XML, metadata, schema, system design

3 Keeping track of crosscutting requirements in UML models via context-based constraints
Felix Bübl
October 2006 OOPSLA '06: Companion to the 21st ACM SIGPLAN conference on Object-oriented programming systems, languages, and applications
Publisher: ACM
Full text available: pdf(565.25 KB) Additional Information: full citation, abstract, references, index terms

One crosscutting requirement (also called aspect) affects several parts of a software system. Handling aspects is well understood at source-code level or at runtime. However, only a few aspect-oriented approaches
